

PREVENTATIVE MAINTENANCE PROGRAMS

Unscheduled downtime is an organisation's number one enemy. In an environment where equipment is expected to run 24 hours per day and 7 days per week equipment failure can result in expensive repairs, unplanned downtime and lost production.

Precise Lubrication has the equipment to help you see the condition of your oil and equipment. In many cases you could prevent failure, enhance machine performance and gain a competitive edge.

There is no need to shut down and with regular oil analysis we can predict failures in progress and point you to the root cause giving you sufficient lead time to schedule corrective maintenance, all with minimal disruption to your operations.

Precise Lubrication will assist your staff to prepare a Preventative Maintenance Program which will enhance your operations and improve your bottom line.

There is no need to guess on the condition of your equipment.

The cost of guessing:

- Unplanned downtime
- Poor utilisation of personnel
- Costly repairs
- Increased part replacement costs
- Increased maintenance costs
- Decreased equipment reliability
- Unnecessary oil changes
- Increased Overtime
- Decreased production
- Decreased profitability

The investment in a Preventative Maintenance Program will quickly be recouped by improved production and reduced costs.

No company is too small to have a Preventative Maintenance program. Call Precise to arrange an assessment of your needs.
