

## STREAMLINER S

### DESCRIPTION:

The Streamliner S is a self-contained unit that offers worry free operation. It contains five different control settings, delivering the proper amount of grease to the lubrication point. The unit has a double spring design at the bottom of the grease dispenser, which pushes the grease upward in a grease intake orifice, then down a guide tube and into the lubrication point. This design provides a more uniform dispensing pressure, prevents hardening of the grease, and allows the grease dispenser to completely empty its contents.

### FEATURES:

- Five different control settings by simply turning the valve position indicator located on top of the grease dispenser
- Double spring design for more uniform dispensing pressure
- Clear reservoir for easy viewing of grease levels

(Streamliner S cont.)

**SPECIFICATIONS:**

Grease Capacity	100 cc (90 grams)
Operating Temperature	-10°F - 250°F (-23°C - 121°C)
Thread Connection	1/4" NPT
Suitable Greases	NLGI 1 - NLGI 2
Spring Force	15 psi (103 kPa)
